

User Manual

Opening Screen

In this screen, the user will be able to begin the game. This screen should be the first screen the user sees. There are three possible selections on this screen. Selecting the How to Play button will bring the user to the instructions panel where there will be detailed instructions on how to play the tune in game. Selecting the start game button will allow to the user to start playing from level one and keep going through all of the additional levels in order.

How to Play Screen

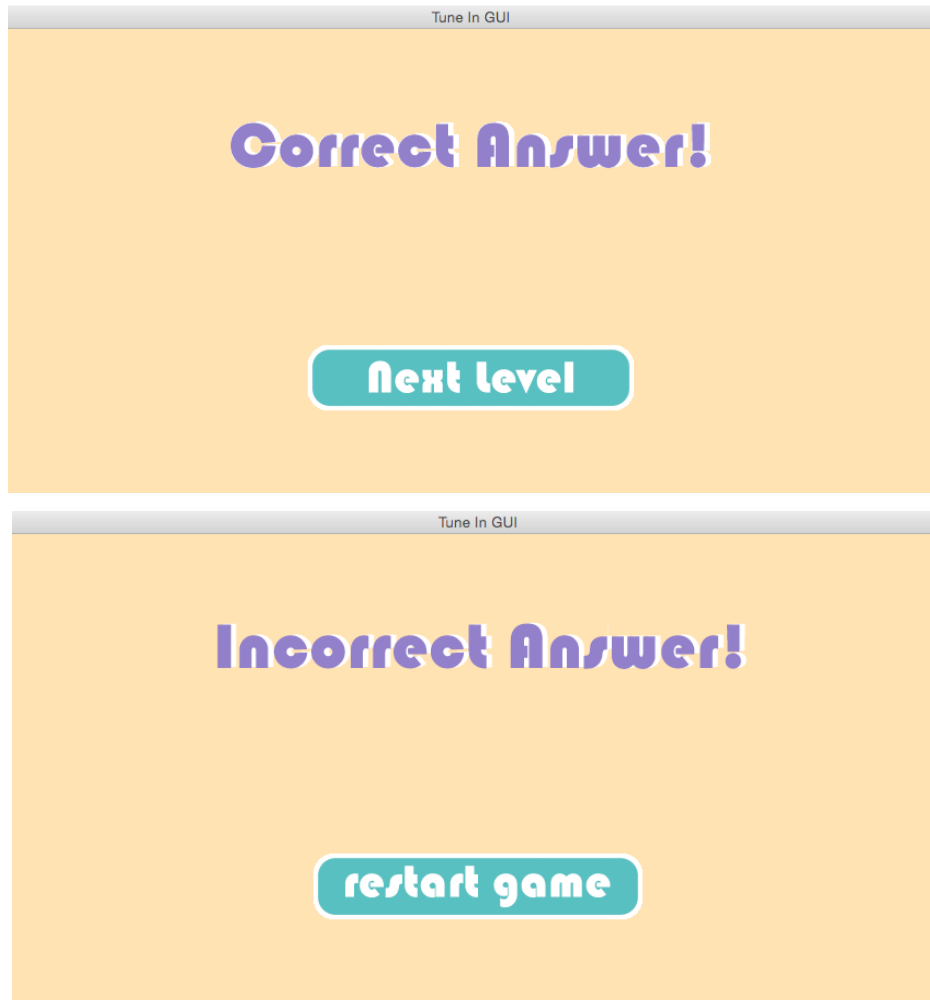

The How to Play screen details how the game runs and explains the game navigation. Pressing the Start Game button will allow you to play the game from the first level onwards

Play Game Screen

The Play Game screen is the screen that the user would see during game play for all levels (with the correctly associated level title). Selecting the I'm Ready Button means that the user is ready to hear the melody. Afterwards the I'm ready button will turn into a "I'm done button". After the user hears the melody, the user can then press the keys that they think are the ones that were played in the correct order. Once the user is finished they will press the I'm done button.

Result Screen 1 (Correct) and Result Screen 2 (incorrect)

These are the screens that will be shown to the user after they press the I'm Done button in the previous screen. If the user gives the correct playback, the correct screen will be shown where they would have the option of continuing to the next level. If the user gives an incorrect playback, the incorrect screen would be shown where they would have the option to restart the game again from the beginning.

GAME WON SCREEN!

This is the final screen that the user will see once they have completed all the levels in order during one gameplay. From here, the user will be able to go home to the Opening Screen.
